EDUCATION

Technical University of Munich

Master of Science in Computer Science

2022 – Present

Munich, Germany

Atilim University

Bachelor of Science in Computer Engineering, GPA: 3.68/4.00 (Top of the Department)

2016 – 2021

Ankara, Turkey

Poznan University of Technology

Exchange student (Erasmus+) in Computer Science

2019 – 2020

Poznan, Poland

RECENT COURSEWORK

- Advanced Topics of SW Engineering
- Requirements Engineering
- Fundamentals of AI
- Intern-Computational Surgery
- Intern-Resilient Cognitive Systems
- DevOps Engineering
- Protein Prediction
- Requirements Engineering
- Engineering Resilient Cognitive Systems
- AWS Cloud Partitionar (Ongoing)

WORK EXPERIENCE

Everstox GmbH

IT & Media Working Student · Part-time

May 2024 – Present

Munich, Germany

- Designed and implemented AI-powered automation solutions using **Large Language Model APIs** (ChatGPT, Perplexity) and workflow automation platforms (**Make.com**, **n8n**, **Airbyte**) to support cross-department workflows, enabling automated triage, data enrichment, and runbook execution.
- Provisioned and managed cloud infrastructure with **Terraform** and **Terraform Cloud**, including S3 buckets, Lambda functions, and secure credential management via **Secrets Manager + KMS** (least-privilege IAM).
- Implemented partner data pipelines S3 → Airbyte → BigQuery with S3 lifecycle policies, SSE-KMS encryption, and monitoring/alerting for reliability.
- Managed **Microsoft Intune** for device enrollment, compliance policies, security configurations, and supported onboarding/offboarding processes including access management.
- Served as first point of contact for internal IT inquiries, supporting office IT infrastructure including hardware management, network troubleshooting, and software deployments.
- Provided technical guidance to other departments on automation initiatives and assisted with IT asset tracking, procurement, and documentation.

Technical University Of Munich

Full Stack Web Developer - Hiwi Assistant · Part-time

November 2022 – March 2024

Munich, Germany

- Participated in TUM's CommonRoad project, focusing on web application development and maintenance.
- Implemented a Docker-driven, master-worker architecture for handling academic and competition submissions.
- Applied React and Material UI for front-end development; Django and PostgreSQL for back-end.
- Managed full spectrum of front-end, back-end, and DevOps tasks
- Played a key role in establishing the submission system infrastructure for the ARCH project, applying innovative tech solutions.

Blickfeld GmbH

Software Developer Intern · Full-time

October 2021 – March 2022

Munich, Germany

- Developed software solutions to enhance efficiency and coordination across teams at Blickfeld GmbH.
- Involved in an advanced Django project, focusing on creating and implementing endpoints in the Django Rest API.
- Engineered various algorithms for these endpoints to optimize functionality.
- Created React applications capable of utilizing the developed endpoints.
- Gained practical experience with Docker.
- Proficient in setting up and managing Git pipelines.

PROJECTS

FlexfitAI (TUM DevOps Course Project)

March 2025 – Sept 2025

- Key contributor to a team project designing and implementing a full-stack web application based on modern DevOps principles, featuring a Generative AI component.
- Engineered a Retrieval-Augmented Generation (RAG) system using Python, LangChain, and a vector database (e.g., Weaviate) for the GenAI module.
- Implemented containerization for all application microservices (client, server, GenAI, DB) using Docker and Docker Compose.
- Developed and managed CI/CD pipelines with GitHub Actions for automated building, testing, and deployment to a Kubernetes staging environment.
- Orchestrated deployment using Kubernetes (Helm/raw manifests) and configured system observability with Prometheus and Grafana.
- Tech stack included: Client (React), Server (Spring Boot), Python (GenAI), Docker, Kubernetes, GitHub Actions, Prometheus, Grafana.

Connectz SetList Integration with Spotify • Project Link

October 2023 – October 2024

- Participated in an TUM Interdisciplinary Project aimed at developing an internal tool for the Connectz platform.
- Enabled users to create their own setlists using Spotify, leveraging Angular and Nodejs in the technology stack.

CommonRoad and ARCH Submission Systems • Project Link

November 2022 - March 2024

- Contributed to projects using Django, React, S3 Buckets, PostgreSQL, RabbitMQ, Swagger, Docker, Gitlab CI.
- Master-Worker Architecture systems for processing, grading, and storing submissions, and facilitated user competitions.

E-Farmers

January 2021 - June 2021

- Developed an e-commerce graduation project, featuring a React.js frontend and Django REST API backend.
- Integrated smart box design using Arduino, with PostgreSQL and Amazon RDS for database management, Amazon S3 for storage, and Heroku for deployment.

SKILLS

Programming Languages: Python, C/C++, C#, Java, JavaScript, SQL

Frameworks & Libraries: Django, React, Angular, Spring, Node.js (basic), .NET Core (basic), Flask (basic), LangChain

Tools & Cloud Technologies: Git, GitHub Actions, GitLab CI, Docker, Kubernetes, Helm, Prometheus, Grafana, PostgreSQL, MySQL, AWS (S3, RDS, Lambda), Terraform, Weaviate

Concepts & Methodologies: RESTful APIs, Microservices, Containerization, DevOps (CI/CD), Cloud-Native Deployment, Observability, RAG (Retrieval-Augmented Generation), Agile/Scrum, Security & Privacy

Academic Interests: AI & Deep Learning, Large Language Models, Safety, Resilient Cognitive Systems

Languages: Turkish (native), English (C1 certified), German (A2 in use)

Hobbies & Interests: Game Development, Web Applications
