Work Experience

Infineon Technologies AG
March 2026 – September 2026

AI Agent Intern & Master's Thesis Student · Full-time — *Munich, Germany*

- Built an **agentic LLM system** that helps executives investigate hierarchical KPI anomalies (**Python, LangGraph, LangChain, DuckDB, SQL**, Claude and GPT models), owning delivery from stakeholder requirements through deployment.
- Developed a **conversational agent** that answers business questions through **20 analytics tools exposed via Model Context Protocol (MCP)**, escalating to guarded, read-only **Text-to-SQL** in a bounded **ReAct** loop with value grounding, clarification and refusal instead of guessing.
- Developed an **LLM evaluation harness** on company data that checks answers against independent reference queries; the tool-first design outperformed direct Text-to-SQL on correctness and cost, with every run traced and reproducible.
- Built an **executive-summary pipeline** that turns each week's flagged KPI anomalies into a short report: bounded agents choose drill-down level and stories, deterministic tools handle clustering, impact scoring and accounting, so every amount reconciles to the source data.
- Designed the agents' **semantic layer** from schemas, stored values and company documentation, with an LLM-driven loop that turns failed questions into reviewable rules, **human-in-the-loop** approval and versioned rebuilds.
- **Deployed** as a Dash web app with MCP servers via **Docker Compose**, with a manifest-checked transfer into the company environment.

Everstox GmbH
June 2024 – February 2026

IT & Automation Working Student · Part-time — *Munich, Germany*

- Built **LLM-powered automation workflows** (ChatGPT and Perplexity APIs, **Make.com, n8n, Airbyte**) for cross-department processes: automated triage, data enrichment and runbook execution.
- Provisioned and managed **AWS** infrastructure with **Terraform** and Terraform Cloud (S3, Lambda, Secrets Manager, KMS), applying least-privilege IAM.
- Built partner **data pipelines** from S3 through Airbyte into **BigQuery** with lifecycle policies, SSE-KMS encryption, monitoring and alerting.

Technical University of Munich, CommonRoad Project
November 2022 – March 2024

Full Stack Web Developer (HiWi) · Part-time — *Munich, Germany*

- Built and maintained a **Docker-based master-worker system** that processes, grades and stores research and competition submissions, including the ARCH competition (**Django, PostgreSQL, RabbitMQ, S3, GitLab CI, React**).

Blickfeld GmbH
October 2021 – March 2022

Software Developer Intern · Full-time — *Munich, Germany*

- Developed **Django REST API** endpoints and the **React** applications consuming them, with Docker and Git CI pipelines.

Education

Technical University of Munich
2022 – October 2026

Master of Science in Informatics — *Munich, Germany*

- **Thesis:** *An Agentic LLM System for Executive Decision Support over Hierarchical KPI Outlier Data* Thesis & Slides

Atilim University
2016 – 2021

Bachelor of Science in Computer Engineering, GPA 3.68/4.00 (ranked 1st in the department) — *Ankara, Turkey*

Poznan University of Technology
2019 – 2020

Exchange Student (Erasmus+) in Computer Science — *Poznan, Poland*

Skills

Core (production use): Python, SQL, LangGraph, LangChain, Agentic AI (multi-agent systems, tool calling, MCP), Text-to-SQL, Semantic Layers, LLM Evaluation, Structured Outputs, DuckDB, Docker
Working: AWS (S3, Lambda, RDS, IAM, KMS), Terraform, BigQuery, Airbyte, PostgreSQL, RAG, Weaviate, Kubernetes, Helm, GitHub Actions, GitLab CI, Prometheus, Grafana, Django, React, JavaScript, TypeScript, C, C++, n8n, Make.com, Linux
Familiar: Node.js, Angular, Spring Boot, Java, C#, MySQL, Microsoft Intune
Developer tools: Git, Claude Code, Codex, GitHub Copilot
Languages: Turkish (native), English (C1, certified), German (A2)
